RESEARCH INTEREST

My central research has been motivated by developing impactful, interpretable and reliable algorithms for machine learning models. Currently, my research focuses on methods at the intersection of probabilistic modeling and deep learning, from which I aims to combine the complementary advantages of these two fields into modeling, inference and learning. I am particularly excited about efficient and scalable probabilistic inference methods applied in complex settings of several domains such as Bayesian deep learning, deep generative models, hierarchical Bayesian models, large-scale online/continual learning.
